Terence Gomes

Brunel, Australia

Dear Terence,

I am writing this cover letter to express my interest in applying for the Technology Graduate Program opportunity with your client in Newcastle. I completed a Bachelor of Computer Science at Curtin University and I am open to relocating to New South Wales, including the onsite component at a mine operation. The breadth of the program across software, infrastructure, cloud and digital transformation is the kind of varied exposure I am actively looking for at this stage of my career.

My internship at AIROBOD is where I got my most direct experience working in a professional technology environment. I built a cross-platform mobile application from scratch in Flutter and Dart, integrated RESTful APIs with backend services, and worked within Agile sprint cycles using GitHub for version control and code reviews. Delivering a complete application in a production environment early in my career gave me a clear sense of how software gets built collaboratively and what it takes to maintain quality when multiple people are working on the same codebase.

On the data and software side, I built an end-to-end machine learning pipeline for my final year project that processed over 1000 industrial safety records, compared multiple model architectures and used Optuna hyperparameter tuning to reach 96% accuracy. The industrial safety context of that project feels particularly relevant given this program includes time at a mine site, where data underpins operational decisions that carry real consequences.

I also hold certifications in Docker and AWS S3, have hands-on experience with CI/CD pipelines and REST APIs, and spent time at BCI Central writing over 30 technical documents for a software platform rollout, which sharpened my ability to communicate technical work clearly to non-technical stakeholders.

I hold valid working rights, am willing to relocate to Newcastle, and am comfortable with the onsite requirements of the program.

Thank you for your time.

Sincerely,

Baibhav Shrestha
